Objet : Recommendation letter

To whom it may concern,

I supervised the internship of first year Master of Suzanne Christé. This internship was focused on the characterization of the thermal performances of an annealing equipment.

During her internship, Suzanne conducted numerous thermal tests in a clean room environment and created entirely two Scilab programs to automate data processing. We are still using these programs and I keep in mind that Suzanne took the initiative, before leaving, to train the users in the operation of her programs.

During these three months, Suzanne showed good experimental qualities by quickly taking in hand the experimental device and showing good initiatives to optimize her tests.

Suzanne has excellent human qualities, which ensured her quick integration within the team. With great autonomy, she was able to solicit the right people to solve her problematic effectively.

For all of these reasons, I am confident that Suzanne will be able to accomplish the demanding task that a thesis represents. Do not hesitate to contact me for further information.
